

PMAC Behavioral Health Subcommittee Meeting #1
June 27, 2019
Meeting Summary

Meeting Attendees

Name	Title	Organization
Stephanie Clouser	Data Scientist	Kentuckiana Health Collaborative
David Hanna	Behavioral Health Program Manager	Passport Health Plan
Meghan Marsac	Assistant Professor of Pediatrics/Pediatric Psychologist	UK Healthcare/KY Children's Hospital
Kimberly McClanahan	CEO	Pathways
Andrew Renda	Director, Bold Goals	Humana

Meeting Items

Introductions

Each attendee introduced themselves to the group.

PMAC Portal Review

Stephanie Clouser introduced the PMAC Portal designed for committee members on the KHC website. In addition to the meeting resources and summaries that were already on there, this year, the PMAC Packet with measure information has been included in a clickable tab format on the portal itself. This should make finding resources easier and members always have the most up-to-date information.

Rubric Review

Stephanie went through the rubric and how to use it, as a refresher.

Current Measures Review

Subcommittee members used the rubric to discuss the measures currently up for review on the 2018 KY Core Healthcare Measures Set:

- Screening for Clinical Depression and Follow Up Plan (NQF #418)
- Tobacco Use: Screening and Cessation Intervention (NQF #28)
- Antidepressant Medication Management (NQF #105)

- There was some concern about inclusion of this measure and that it might prioritize medication over other types of effective treatment
- Measure is included in programs pretty across the board
- Might want to replace with an outcomes-based depression measure
- Use of Opioids at High Dosage
 - Opioids are a huge focus, people see providers as able to have an impact on scores
- Use of Opioids from Multiple Providers
 - Opioids are a huge focus, people see providers as able to have an impact on scores

The committee agreed to include each of the five measures that currently are on the Kentucky Core Healthcare Measures Set on the matrix, since there were just a handful of them. They agreed that all of the measures – both existing and new – should be reviewed together.

Potential Measures Review

The group discussed measures to be considered for addition to the 2019 KCHMS, including measures that were suggested last year but were not approved by the oversight committee and new measures that weren't established yet. This included:

- Depression Remission at Twelve Months – Progress Towards Remission (NQF #1885)
 - The measurement of progress is more meaningful than lowest common denominators and antidepressants
- Follow-Up After Hospitalization for Mental Illness (NQF #576)
 - Post-acute measures are important
 - Issue with volume, and most practices just won't have the volume for this measure
- Pediatric-designed behavioral health measures
 - Depression screening measure covers adolescents, but it would be good to have a measure looking at screening for trauma (such as ACEs)
- Serious mental illness
 - Primary care might not be the best place to measure this; research shows that seriously mentally ill people aren't seeking out treatment in primary care

Next Steps

The next and final meeting will be on July 10. In the meantime, Stephanie will send a worksheet of the measures up for discussion for committee members to assess and score. The results will be used at the July 10 meeting.
